Summary of Meeting:

Contact CSA for more details on this meeting.

This was a CSA Domestic Gas Ranges Joint Technical Sub-Committee meeting held during the annual CSA Committee Week. The main purpose of the meeting included reviewing the task force progresses, requests of changes, and action items. Scott Ayers chaired the meeting.

The TSC first reviewed the editorial comments on Z21.1 second amendment. The group discussed editorial corrections, addition of a clause to reference Annex H for smart enabled appliances, and the definition for Protective Extra Low Voltage (PELV). CSA indicated that the publication of Z21.1 second amendment will be scheduled for March 2023.

The TSC then reviewed updates of task forces, outstanding action items, and common items. The group also discussed and accepted the request for change to revise the maximum allowable temperature in Table 4 for Type 300 stainless steel from 700°F to 900°F to align with clause 4.6.3. Staff actively participated in the discussion and supported the change.

The meeting was adjourned around 2:45 ET. CSA staff will schedule the next meeting for March 2023.
